Performance, reliability, security and compliance in the cloud

AWS Well-Architected Assessment

Optimised cloud architecture for public authorities and universities

When designing and operating your cloud applications, proven best practices help you to maximise the value of the cloud and minimise risks. Using the Well-Architected Framework (WAF), public sector organisations can continuously evaluate and optimise their cloud environment. SoftwareOne is here to support you.

The AWS Well-Architected Framework (WAF) is a comprehensive set of guidelines and best practices primarily related to security and governance, but also to other relevant aspects of cloud operations like reliability, performance, sustainability, and cost. SoftwareOne will work with you to conduct an AWS Well-Architected Assessment for your key workloads to identify risks and optimisation potential in your architecture, provide clear recommendations for improvements and help prioritise them.

The six pillars of the Well-Architected Framework

AWS WAF is based on six pillars: operational excellence, security, reliability, performance and efficiency, cost optimisation and sustainability.
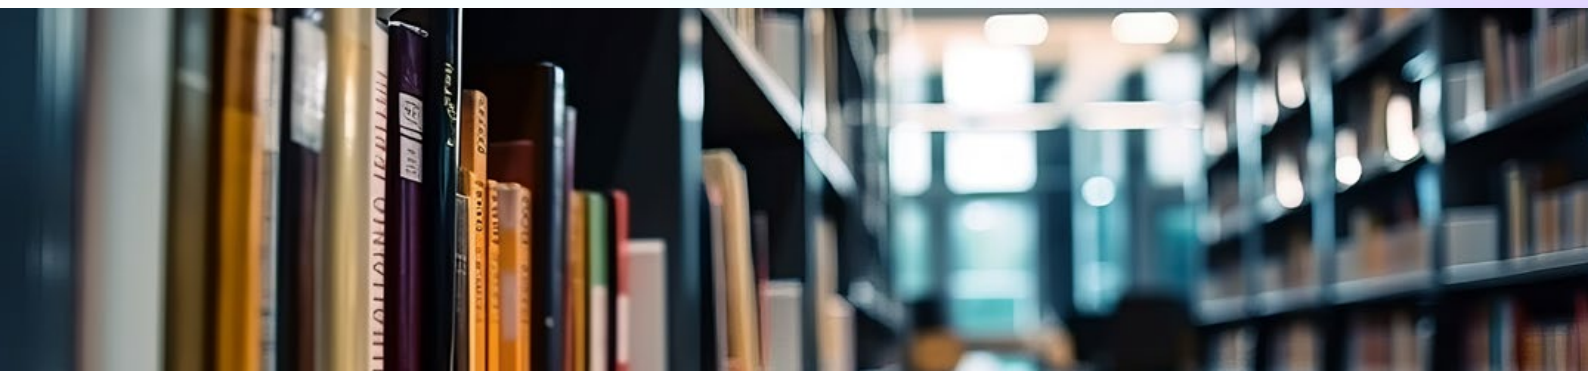

Specific architectural decisions always require trade-offs between these aspects. With the help of AWS WAF, you can better evaluate the risks and benefits of your decisions and optimise the result.
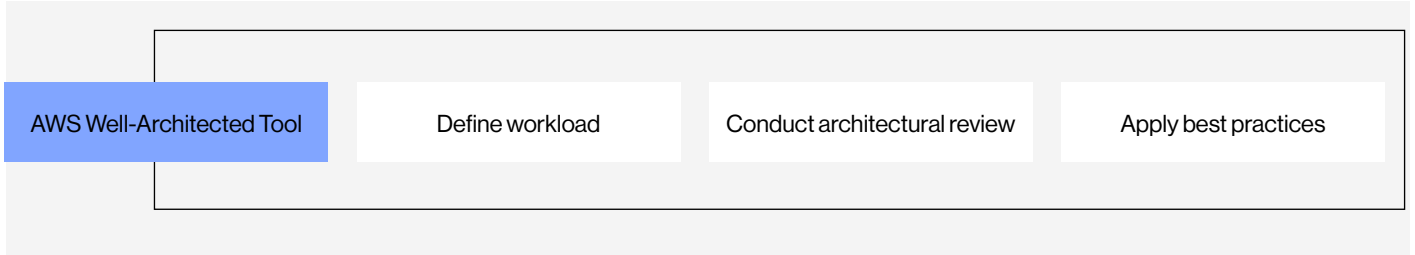

Support from our cloud experts

SoftwareOne will introduce you to the Well-Architected Framework, help you answer the WAF questionnaire and assess your workloads according to WAF best practices and your business priorities. As a result of the assessment, we present clear recommendation to you and outline practical implementation plans for problem solving and optimisation.

Well- Architected with SoftwareOne – This is how you benefit

- Best Practices for your cloud workloads
  - Operational Excellence
  - Security
  - Reliability
  - Performance and efficiency
  - Cost optimisation
  - Sustainability
- Structured methodology for the continuous evaluation and optimisation of your workloads
- Identify risks and resolve problems quickly
- Consideration of individual conditions and priorities
- Reduce costs and achieve goals more efficiently

| AWS Well-Architected Tool | Define workload | Conduct architectural review | Apply best practices |

Benefit from financial support

With SoftwareOne, the assessment is free of charge for you (after confirmation from AWS) and can provide you with further financial support from AWS to help you optimise your cloud usage.

aws PARTNER Migration Services Competency **aws PARTNER** Managed Service Provider **aws PARTNER** Public Sector Solution Provider **aws PARTNER** Premier Tier Services **aws PARTNER** Well-Architected Partner Program

SoftwareOne – Strategic partner for public authorities and universities

With over 3,500 cloud experts around the world, SoftwareOne supports organisations on their cloud journey. SoftwareOne's dedicated team of experts for public sector and education customers has more than 30 years of experience in dealing with complex contracts and the specific sector requirements.

As one of the largest AWS service partners worldwide with over 1,000+ AWS certifications, we offer nine AWS validated consulting competencies, including migration, DevOps, security, SAP and Microsoft workloads. We are also a recognised AWS Program Partner for Public Sector and Public Sector Solutions, Premier Tier Services, the AWS Well-Architected Partner Program and AWS Managed Services, among others.
